About Us

Your Trusted Partner in BIM Excellence

At Arangath Info Solutions, we specialize in providing cutting-edge Building Information Modeling (BIM) solutions to architects, engineers, and construction firms globally.

Global Expertise

Deep understanding of UK & US BIM standards.

Skilled Professionals

Certified experts in Revit, AutoCAD, Navisworks, Tekla & more.

Commitment to Excellence

Delivering precise, high-quality BIM models that meet your needs.

About Us

Your Trusted Partner in BIM Excellence

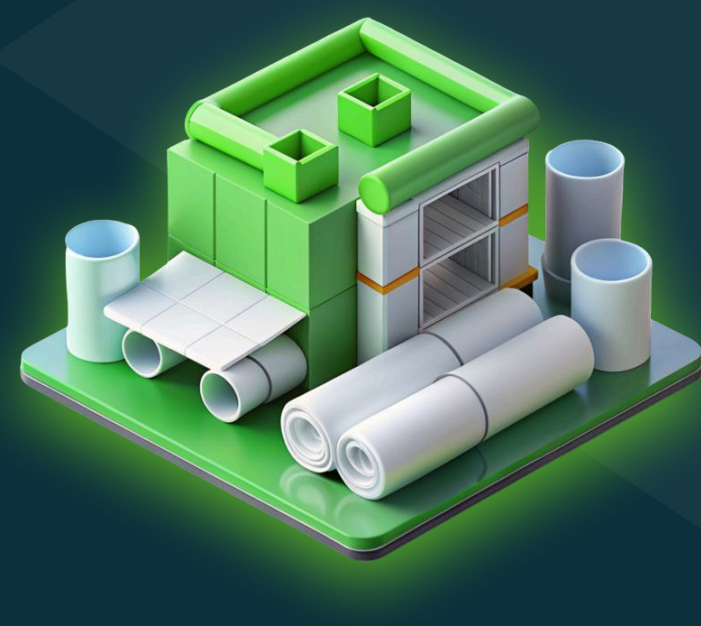

At Arangath Info Solutions, we specialize in providing cutting-edge Building Information Modeling (BIM) solutions to architects, engineers, and construction firms globally. We leverage world-class talent, advanced tools, and industry best practices to deliver tailored BIM services that facilitate risk mitigation, cost optimization, streamline workflows, and enhance project outcomes.

Why Choose Us?

Global Expertise, Local Focus

Deep understanding of UK
and US BIM standards.

Skilled Professionals

Certified experts in Revit, AutoCAD,
Navisworks, Tekla, and more.

Commitment to Excellence

Delivering precise, high-quality BIM
models that meet your needs.

Our Mission

To empower architects, engineers, and construction professionals with cutting-edge BIM solutions that streamline workflows, enhance decision-making, and bring visionary projects to life. We are committed to delivering sustainable, client-focused outcomes with unwavering precision, global compliance, and a collaborative spirit that transforms challenges into opportunities

Our Vision

To lead the future of Building Information Modeling by delivering innovative, sustainable, and globally compliant solutions tailored to our clients' unique needs. We envision a world where precision, collaboration, and excellence drive transformative results, creating lasting value for every project we touch

Our Values

Integrity in every detail

We uphold transparency, reliability
and ethical practices in every project
we undertake

Excellence as Standard

We strive for perfection in every
detail ensuring that our clients
achieve exceptional results

Built for Precision

We deliver accurate, high-quality
BIM models to eliminate errors
and optimize project outcomes

Powered by Collaboration

We prioritize seamless teamwork with clients and
stakeholders to ensure aligned goals and success

Adaptable to your needs

We customize our services to align with diverse
project requirements and evolving industry trends

We would love to
hear from you

Our Services

Delivering Competent Structural Engineering Design Services Leveraging the Latest Technology Practices

provides structural design services to consulting engineering firms in the US, Canada, UK and Africa. We support all phases of the structural engineering design process, right from design and modeling to Analysis of pre-existing designs and construction documentation. While endeavoring to maintain international standards in quality, we strive to reduce product design cycle time as well as ensure cost effectiveness, making working with us a value add for our customers.

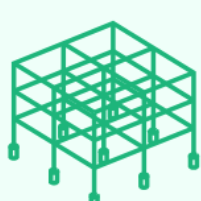

What we Offer

Structural Services

Experience expert Structural Engineering Design Services that ensure robust foundations, sustainable solutions, and flawless building structures, combining precision and innovation to meet your project's unique needs and exceed industry standards.

[Learn More](#)

Structural Design and Analysis

We deliver precise structural engineering solutions, utilizing advanced analysis methodologies to ensure optimal safety, stability, and compliance with international codes and standards

[Learn More](#)

Structural BIM Modelling

We develop intelligent 3D structural models enriched with data to optimize design workflows, enhance coordination, and enable efficient project execution

[Learn More](#)

As Built/Point Cloud Services

We convert point cloud data or as-built conditions into accurate, information-rich 3D BIM models, supporting renovations, retrofits, and facility management

[Learn More](#)

Rebar 3D BIM Modelling and Detailing

Our team creates accurate 3D rebar models with detailed specifications, ensuring constructability, error-free fabrication, and seamless integration into structural systems

[Learn More](#)

Rebar 2D Detailing

We provide detailed 2D rebar layouts and bar bending schedules, enabling precise reinforcement planning and on-site execution

[Learn More](#)

Structural CAD Drafting and Documentation

Our CAD drafting services offer precise, detail-oriented structural drawings and comprehensive documentation that support efficient project delivery

[Learn More](#)

MEP Services

Experience expert Structural Engineering Design Services that ensure robust foundations, sustainable solutions, and flawless building structures, combining precision and innovation to meet your project's unique needs and exceed industry standards.

[Learn More](#)

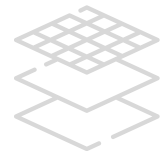

MEP BIM Modelling

We craft coordinated MEP BIM models that integrate mechanical, electrical, and plumbing systems, ensuring seamless design-to-construction workflows.

[Learn More](#)

BIM Sustainability

Our sustainable BIM solutions incorporate energy-efficient designs and performance optimization strategies to promote green building practices and compliance with environmental standards.

[Learn More](#)

Clash Detection and Coordination

We perform advanced clash detection and resolution across disciplines, leveraging BIM technology to eliminate design conflicts and ensure construction readiness

[Learn More](#)

Shop Drawings – Spool Drawings

Our detailed shop and spool drawings facilitate precise pre-fabrication and on-site assembly of MEP components, reducing installation errors and improving efficiency.

[Learn More](#)

As Built/Point Cloud Services

We transform as-built or laser-scanned point cloud data into intelligent, detailed 3D BIM models to assist with accurate facility documentation and lifecycle management.

[Learn More](#)

Miscellaneous Services

Experience expert Structural Engineering Design Services that ensure robust foundations, sustainable solutions, and flawless building structures, combining precision and innovation to meet your project's unique needs and exceed industry standards.

Structural Design & Analysis

Rightserve™ provides structural design services to consulting engineering firms in the US, Canada, UK and Africa. We support all phases of the structural engineering design process, right from design and modeling to Analysis of pre-existing designs and construction documentation. While endeavoring to maintain international standards in quality, we strive to reduce product design cycle time as well as ensure cost effectiveness, making working with us a value add for our customers. Engineering firms have an added advantage with us in the sense that we even offer our services for the smallest part of your project and you can bring us in at any stage.

Our ‘Design engineering services’cover the following areas

Reinforced Concrete Structures

Our offerings for R.C.C. structures are focused on multistory (residential, commercial, parking, institutional and Villas) buildings wherein we provide the following services

Structural Analysis

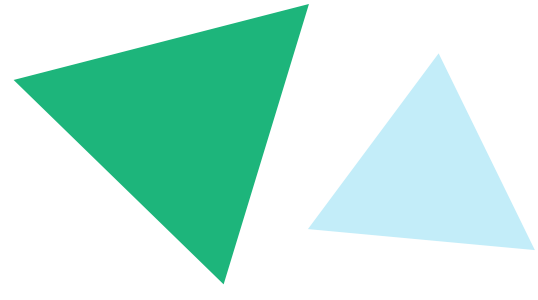

- ▶ 3D-Space frame analysis for building structures
- ▶ Finite element analysis for all types of structures
- ▶ Gravity load analysis for Dead load, Live Load, Imposed load & Snow load combinations
- ▶ Knowledge of loading standards – BS, ASCE, AS and SABS codes
- ▶ Lateral load analysis for Dead load, Wind load, Seismic load combinations

Preliminary Structural Designs / Drawings

- ▶ Evaluation and selection of primary structural systems
- ▶ Preliminary foundation layout
- ▶ Preliminary analysis, establishing critical member sizes for preliminary elements
- ▶ Primary framing drawings, with sizes of primary members only and indicative structuralconnection types
- ▶ Preliminary input to Architect on architectural elements

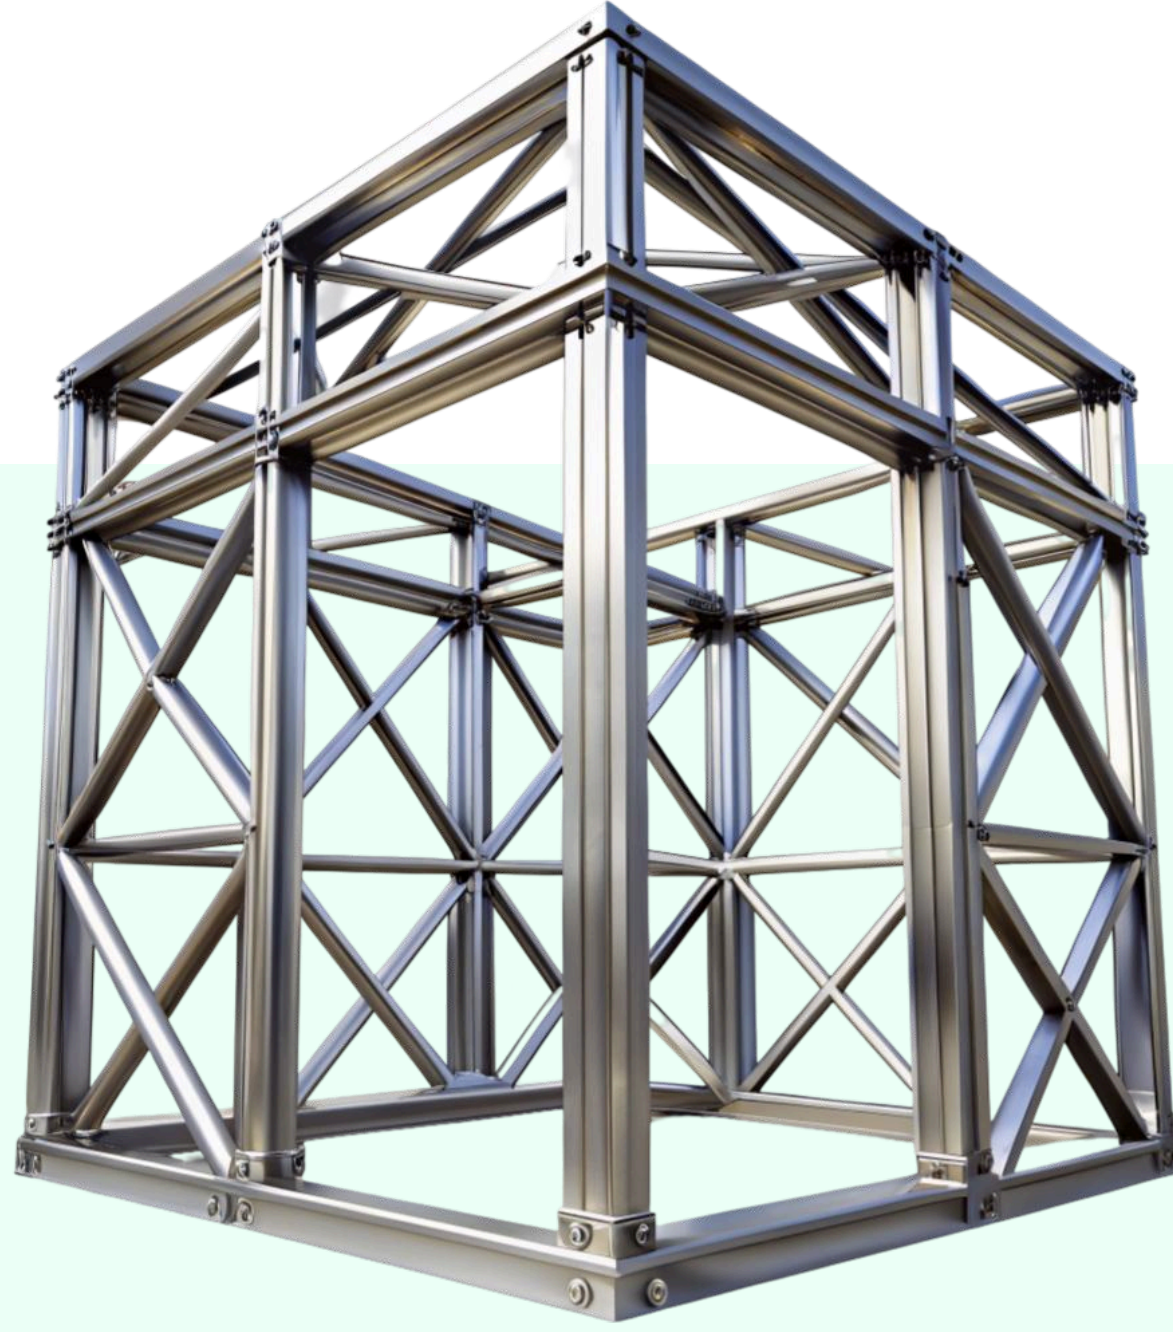

Detailed Structural Designs / Drawings

- ▶ Design basis and detailed structural analysis
- ▶ Typical Design Calculations for all elements
- ▶ Determination of all primary and most secondary structural element sizes
- ▶ Drawings defining all structural elements, including plans, elevations, sections and details with adequate cross- referencing
- ▶ Layout and size of secondary framing members
- ▶ Details and positions of control / construction joints
- ▶ Structural Detailing for all members

Steel Structures

Our offerings for Steel structures are focused on multistory (residential, commercial, parking, institutional and Industrial) buildings wherein we provide the following services

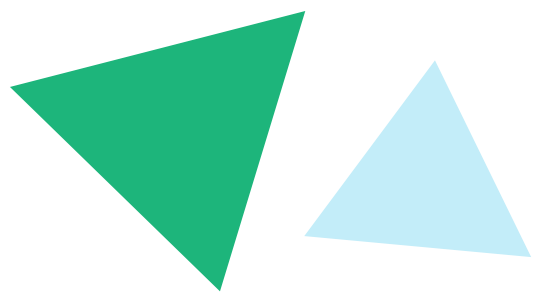

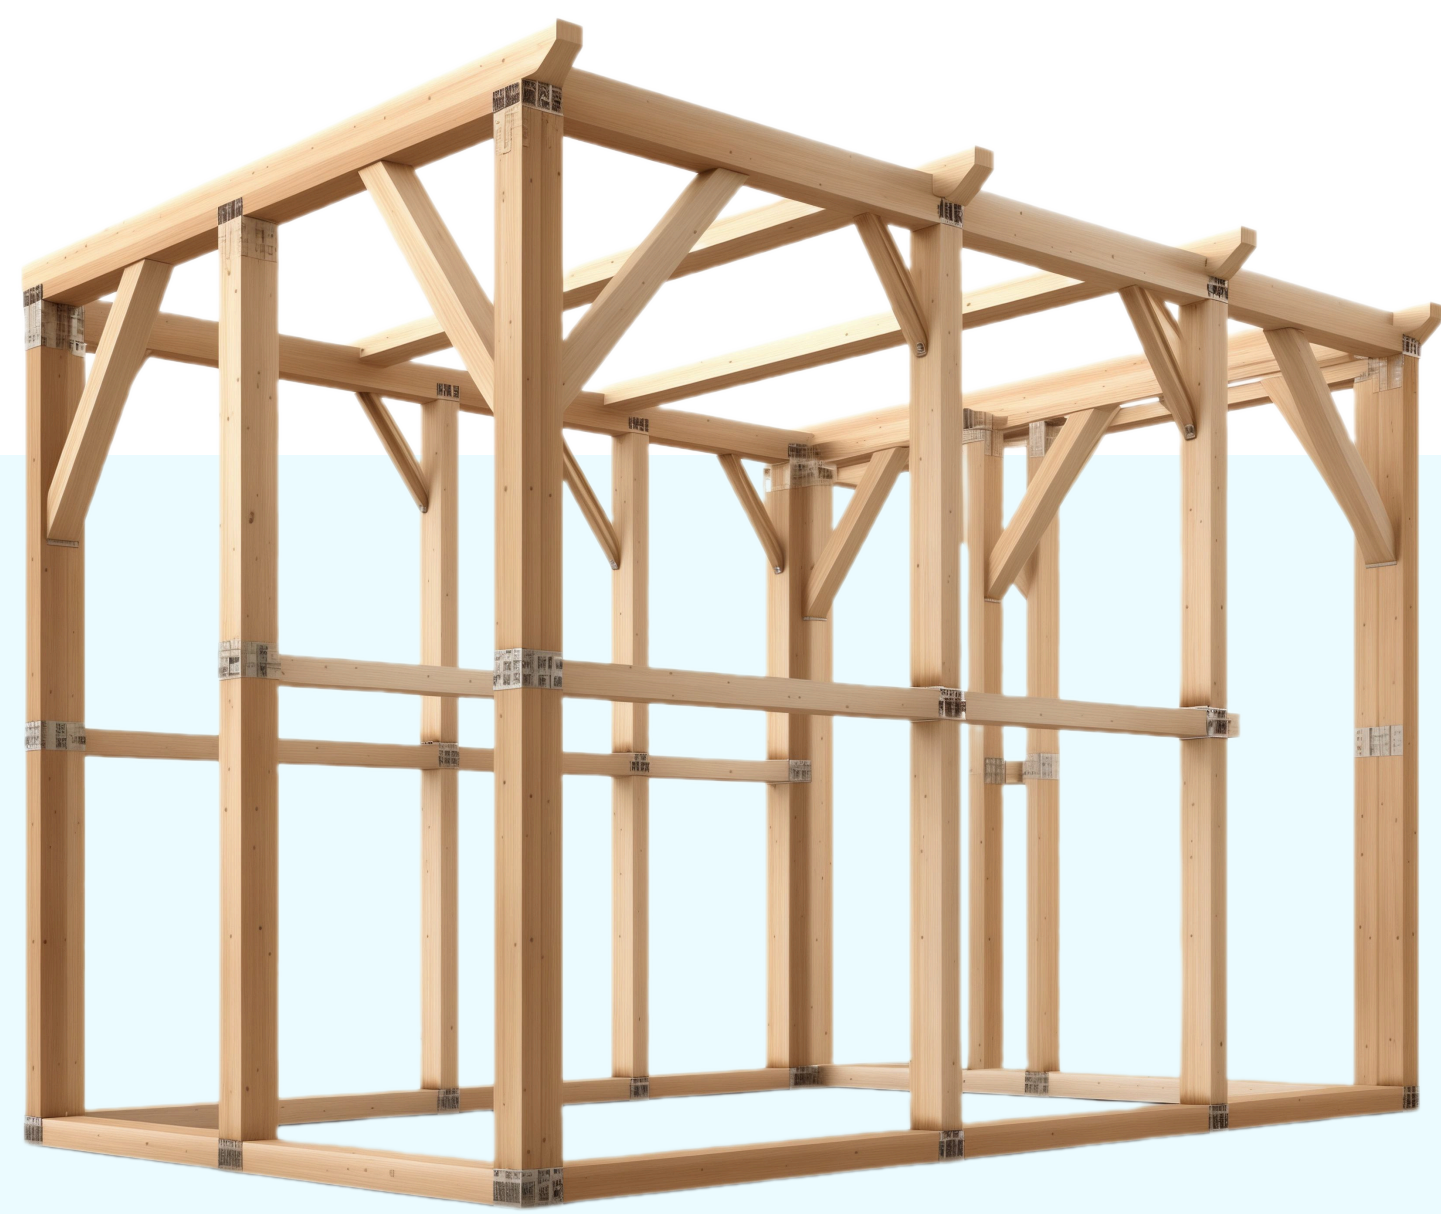

Structural Analysis

- ▶ 3D-Space frame analysis for building structures
- ▶ Finite element analysis for all types of structures
- ▶ Gravity load analysis for Dead load, Live Load, Imposed load & Snow load combinations
- ▶ Lateral load analysis for Dead load, Wind load, Seismic load combinations

Erection Framing Plan

- ▶ Different sizes of members
- ▶ Loads on framing plan
- ▶ Connection details
- ▶ All dimensions (member spacing, elevation etc.)
- ▶ Design calculation for typical members as well as for end connections

Timber Structures

Our offerings for Timber structures are focused on residential buildings wherein we provide the following services.

Structural Analysis

- ▶ 3D-Space frame analysis for building structures
- ▶ Finite element analysis for all types of structures
- ▶ Gravity load analysis for Dead load, Live Load, Imposed load & Snow load combinations
- ▶ Lateral load analysis for Dead load, Wind load, Seismic load combinations

Erection Framing Plan

- ▶ Different sizes of members
- ▶ Loads on framing plan
- ▶ Connection details
- ▶ All dimensions (member spacing, elevation etc.)
- ▶ Design calculation for typical members as well as for end connections
- ▶ Structural standard notes
- ▶ Individual member details
- ▶ Details of miscellaneous members like staircases and railings, handrails, joists, trusses

Other Structural Services

Structural BIM Modelling

We develop intelligent 3D structural models enriched with data to optimize design workflows, enhance coordination, and enable efficient project execution
